

Flo's solar panel appeal

Flo's is reducing its carbon footprint by installing solar panels! We're hoping to reduce our CO₂ emissions by roughly 3.52 tonnes/year and save around £5,000/year on energy bills - a vital step to help us reduce our environmental impact and save money as energy prices rise.

This means we'll be able to invest more in what we love doing – supporting new diversity led social enterprises, supporting families, running community events and working with the OX4 food crew to tackle food insecurity.

We need to raise £22,813 to buy and install the panels. Thanks to a grant from OxFutures we've already raised over £5,000 but need your help to find the remaining £17,110. We are also applying for other grants.

Flo's is a community organisation, and we hugely appreciate your support in whatever form it takes. Thank you for considering donating by scanning the QR code or follow the link below floxford.org.uk/donate/
